Description and applications

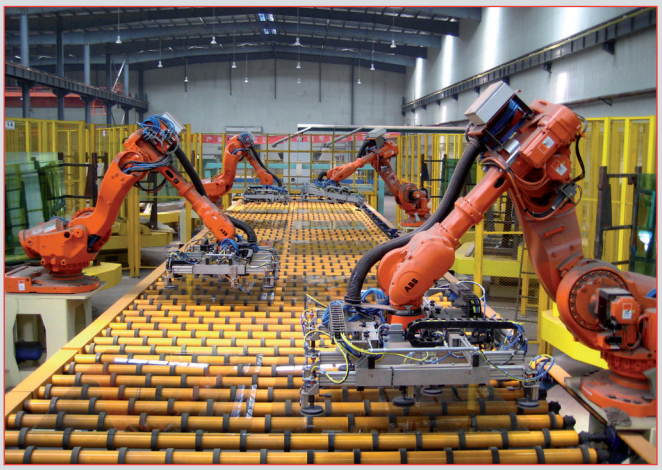
The digital pyrometers PYROSPOT DT 4G are specifically designed for applications in glass industry. The devices are suitable for temperature measurement from 200 °C to 1800 °C on glass surfaces, float glass and liquid glass.

The solid body allows usage even under rough environmental conditions. The bright temperature display is visible even over long distance.

The very small sensor head allows even the acquisition of measuring object which are difficult of access.

The temperature linear standard output signal of 0/4 to 20 mA allows easy implementation in existing measuring and controlling systems. The device is equipped with a galvanically isolated RS-485 interface, which allows parameterising and software evaluation even in bus systems.

All parameters are adjustable via push-buttons and display directly on the device. Also by using the comfortable parameterising and evaluation software PYROSOFT Spot the parameters can be easily adjusted to the application.



Typical application areas:

- Glass industry
- Float glass
- Glass bottle production
- Liquid glass
- Glass forms
