TrueInRush****
A CHAUVIN ARNOUX innovation

Thanks to the TrueInRush function, the clamp automatically determines the type of signal and the level of current in the installation and then adapts the algorithm and measurement procedure to capture the next current surge.

Assessing the safety of your installations

measurements according to the applicable European standards:

IEC 60364,
EN 61557,
NF C 15-100,
VDE 0100,
NIN/NIV,
IEE 17th.

Electrical installation sensors enable electricians to certify the safety of the infrastructures for which they are responsible, whatever the environment.

ISOLATION (IEC/EN 61557-2)

Measurement without voltage

Why measure the isolation?

- To check that there is no mechanical deterioration of the conductors
- To check the conductors' isolation in relation to the earth

Voltage of l'installation	Test voltage	Necessary isolation
< 50 V	250 V	$\geq 250 \text{ k}\Omega$
50 V to 500 V	500 V	$\geq 500 \text{ k}\Omega$ or $\geq 1 \text{ M}\Omega$ depending on standards
> 500 V	1000 V	$\geq 1 \text{ M}\Omega$

EARTH (IEC/EN 61557-5)

Why measure the earth and how?

- Using the method with a single auxiliary stake (TT and impedance IT networks)
- The Ra value must be as low as possible to allow the fault currents to flow to earth

PHASE SEQUENCE (IEC/EN 61557-7)

How can I identify the different phases in a three-phase network?

- By a clear indication of their rotation direction.

CONTINUITY / BONDING (IEC/EN 61557-4) (I $\geq 200 \text{ mA}$)

Why test the bonding?

- A PE conductor in good condition correctly connected to the earth plate will allow the fault currents to flow to earth.

RCDs (IEC/EN 61557-6)

Why check the RCDs?

- To check that they trip:
 - During the test = $I_{\Delta N}$
 - In less than 300 ms for the standard types and 500 ms for selective RCDs, at a current between $I_{\Delta N}/2$ and $I_{\Delta N}$.

LOOP (IEC/EN 61557-3)

Why measure the loops?

- To measure the earth by excess without stakes
- To calculate the short-circuit current in order to size the safety devices appropriately
- To check the fault voltage (with probe connected)

C.A 6536

"Special & ESD" applications

With a variable test voltage from 10 V to 100 V in 1 V increments, this model is intended for special applications in sectors such as avionics, space and defence, which often require a low test voltage and strict adherence to the programmed value. With appropriate electrodes, the 10 V and 100 V test voltages can also be used for electrostatic discharge applications.

C.A 6532

"Telecommunications" applications

- Insulation tests at 50 V or 100 V
- Specific functions: measurement of resistance, capacitance, leakage current and AC voltage.
- Measurement of the difference in resistance between 2 wires in a pair by using the ΔREL function.
- Display of the length of the line being tested, thanks to programming of the linear capacitance in nF/km.

C.A 6522, C.A 6524, C.A 6526

"Industrial Maintenance" applications

Periodic insulation tests on installations and equipment help to prevent incidents by setting up preventive maintenance designed to detect ageing and premature deterioration of their insulation characteristics:

- Measurement of insulation over a programmed duration
- Alarms and Pass/Fail indicator light (C.A 6526)
- PI and DAR ratios to determine the quality of the insulation, with the advantage of not being significantly influenced by the temperature
- Storage in memory to compare the measurement histories

C.A 6534

"Electronics" applications

Thanks to its wide test-voltage range from 10 V to 500 V, this model covers the specific requirements of the electronics industries, for both low-current applications and power stages. Its measurement range is from 2 kΩ to 50 GΩ.

Remote control probe

The remote control probe is an accessory specially developed to make your insulation tests in the field simpler and quicker.

- Insulation measurement can be triggered with a single press on the probe's yellow button.
- Equipped with a torch function, this probe effectively lights the point of measurement.
- Thanks to the tester's backlit screen, the measurement results are visible at all times, including in places with poor lighting.

DataView® software

DataView® software, with its Megohmmeter Transfer module, automatically recognizes the instrument when it is connected to the PC and opens the corresponding menu. This tree-structure menu offers users direct access to the data recorded in the instrument and its configuration.

The other functions available are:

- Activation of remote tests
- Real-time display
- DAR and PI references
- Graphical plot of the tests
- Generation of measurement reports
